SMB

**Breastfeeding** is a fantastic way of bonding with your baby from the moment they are born, and has many benefits.

**Breast milk** provides all your baby needs to grow and develop until they reach 6 months old, plus it protects them from sickness, diarrhoea, chest and ear infections, asthma and diabetes. Breast milk allows you to feed your baby at any time, any place; it is easy to digest, always the right temperature and is absolutely free - saving an estimated £500 per year.

**Breastfeeding** also helps mums to lose weight faster after childbirth, and lowers the risk of osteoporosis, ovarian and breast cancer.

Expressing breast milk means that your baby can continue to enjoy all the natural goodness it provides, even when you cannot be with them.

**Mums use breastpumps for many reasons:**

- to continue breastfeeding, if you are returning to work
- to express breast milk, which is later fed to your baby
- to stimulate lactation, if you have a low milk supply
- to relieve engorgement, helps relieve the symptoms
- to feed your baby, if you need to take medication that affects the breast milk

ARDO offer a choice of single or double pump electric hospital grade breastpumps. The pumps are quick, efficient, safe to use and are available to hire or purchase.

Nobody protects the purity of mothers' milk as well as we do.

Our breastfeeding products are manufactured exclusively from material free from Bisphenol A (BPA)

**Maximum safety and hygiene**

The silicone membrane pot integrated into the PumpSet is at the heart of our "VacuuSeal" technology.

This technology ensures that there is a total barrier between the breast milk and any pathogenic agents. "VacuuSeal" guarantees protection of the breast, breast milk and the pump against contamination.

ARDO is WHO Code compliant
